Diagnosis: Universal 3rd trimester USG

Screening for fetal growth restriction with universal third trimester ultrasonography in nulliparous women in the **Pregnancy Outcome Prediction (POP) study**, a prospective cohort study

Ulta Sanku, Kapil Dhillon, Ashish Prasad, Bharti Lakshmi, Pooja Guleri, CS, S. An

	SGA		Severe SGA	
	Selective	Universal	Selective	Universal
Sensitivity (%)	20% (15-24)	52% (51-62)	32% (22-42)	77% (68-86)
Specificity (%)	98% (98-99)	90% (89-91)	97% (97-98)	87% (86-88)

Interpretation Screening of nulliparous women with universal third trimester fetal biometry roughly tripled detection of SGA infants. Combined analysis of fetal biometry and fetal growth velocity identified a subset of SGA fetuses that were at increased risk of neonatal mortality.

Pregnancy Outcome Prediction (POP) Study,
[Lancet, 2015]
